

# **INSTITUTE BEST PRACTICES**

## **[Pioneer Internal Quality Assurance Cell (IQAC) Initiative]**

### **1. Title of the Practice:**

"Automation of Student and Examination related functions using ERP"

### **2. Objectives of the Practice:**

The main objective of the entire system is to provide a user friendly interface and powerful data system which make this system more useful. The College ERP system computerizes all the details of the college system which are updated by admin only can access by the students and faculties. ERP on college management system reduces the most of the human work that are done earlier to managing the college system. Once the details are entered into the system by the authorized person then there is no need for other users to deal with separate section. Only a person that is having an administrative authorization is enough to maintain all the reports and records of the system. The security can also be provided as per the requirements. The main thing is that our system reduces the human works at a great effort. It can be helpful such that - Records are always updated. - Manpower is decreased or reduced. - Large amount of data regarding college and their modules can be stored. - Accurate and perfect calculations are made. - Maintenance of file is efficient and flexible.

### **3. The Context:**

A Higher Education ERP system can be used as a solution to integrate and increase the efficiency. We proposed a comparison framework of ERP solutions for higher education management. Due to a constant change in education landscape, it has become mandatory for higher education institutions to adopt the latest education ERP solution to handle all academic & non-academic activities effectively and provide a better learning environment to students including quality education. The replacement of the older legacy systems with centralized ERP brings quick and quantifiable improvement in the administration process. The software includes a set of tools which modernizes the campus along with upgrading the planning and management of processes related to student enrollment, courses, library, exams, result declaration etc.

An ERP system automates and streamlines all the processes functioning within the boundaries of the institution to significantly improve the effectiveness of allocating and operating academic resources better.

College ERP system provides a simple interface for maintenance of different student, department, faculties, library and others information. All the colleges usually have a number of departments and educational modules such as courses, seminar hall, etc. Managing all these departments and other modules manually is a very difficult and hard, ineffective and expensive task. So here we propose an ERP system for college. Our college ERP system has all the information about the students, teachers, events, library, departments and other respected information. The system allows the admin to add students, faculties and any other events. Our system allows a faculty to enter or input student's attendance into the database which can later be viewed by students and faculties. The students can view his/her attendance through a separate student login. The admin can upload the timetables for various departments for exam

preparation. The time table is then available to be viewed by faculties and students on the web portal. These systems have easy user interface and have powerful data management system which makes this system is very useful.

Enterprise Resource Planning (ERP) (ACCSOFT 2.0) college web application is the one kind of web application which integrates all the modules and functionalities of college system on a single system that can be handled by the administrative head and access by the students and faculties with valid user id and password. As we know that, a college consists of different departments, such as course departments, fees management, library, event management etc. Nowadays applications and uses of information technologies is increased as compared to before, each of these individual departments has its own computer system to do their own functionalities. By having one main system they can interact with each other from their respected system by having valid user id and password.

#### 4. The Practice

The designed software for college database contains up to date or accurate information of the college. That should improve efficiency and flexibility of college record management and to provide a common and or simple platform for everyone to access the student's information.

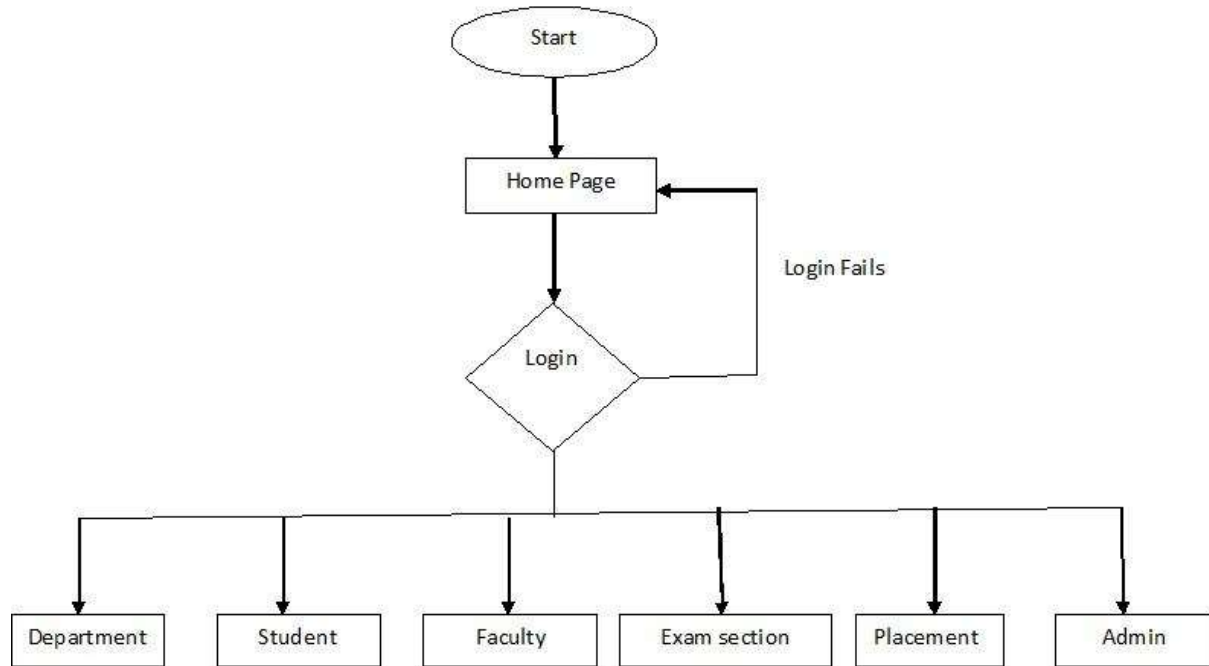

##### Simplify Admission Process

Admission process in colleges, universities or any other educational institutions is more often complicated and long. Each application consists of many pieces of information about the candidate including their date of birth, marks, specialization, and more. To determine the candidate's eligibility, we need to check all these records. If the task is done manually, the process becomes extremely time-consuming. However, with the help of ERP software, this procedure to enroll best-fit students gets simple. The system displays all the necessary components at a single place, which makes them easily accessible to the administrator and thus speeds up the accreditation process.

## Centralized Data Management

Educational institutions need to store tremendous amounts of information about students, books, exams schedules and other data. An ERP solution integrates the whole campus and all the branches in a common system to make the process of data management easy. The software enables sharing of stored data across all departments to keep faculty, staffs, and students updated on important announcements. This makes a better control of internal and external communication in our institution and never experiences a communication breakdown.

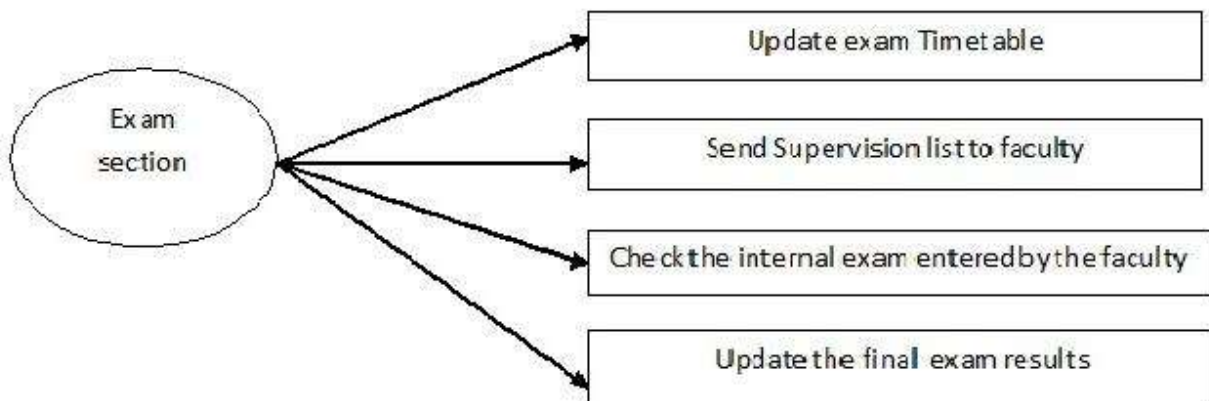

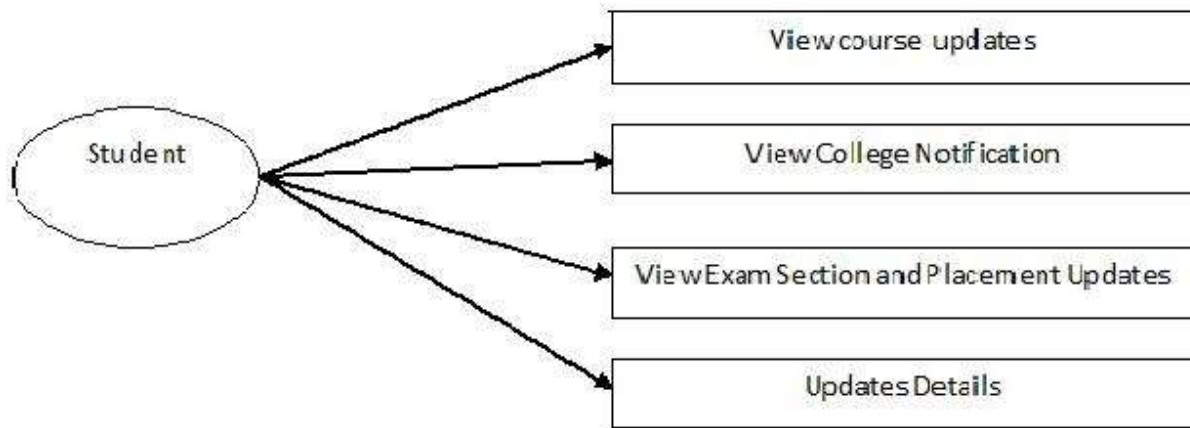

## Cost Effective

One of the most prominent advantages of ERP implementation in our institution is its cost-effectiveness. The software cuts down manual tasks involved in the fundamental methods of campus administration such as admission, payroll and others to reduce the number of man-hours, resulted in saving of money. The expenditure spared can be used for imperative educational purposes.

## Quicker Management Process

Education ERP system provides easy and quick access to information about students, staff, timetables, examinations, admissions, fees, reporting, and so on. This helps the management to consider and analyze various aspects of the institution faster, leading to growth in planning capabilities. The improved data access also boosts well-informed decision-making through strategic data analysis.

## Improve Resource Management

An efficient ERP system puts an end to manual maintaining of cumbersome resource databases. The software can track real-time resource usage, enabling you to optimize operations, allocate and monitor all activities in the institution in a seamless manner. This helps accelerate day-to-day activities and work out things well in time in case of any issue or problem.

## Data Security

Keeping track of the data manually is quite a tedious task. For this, we have a robust ERP solution that can automate the process of recording, thus making the process simple and effortless.

Our educational institution needs to keep records of students for the ongoing academic year as well as the alumni, faculty, books, and other resources of single or multiple campuses. Combined, the amount of data becomes huge and storing these physically on the shelves is never secure. ERP software can store this enormous amount of information securely. The application has a **BACK UP** system to preserve the info, which is quite impossible to have if it is stored in files.

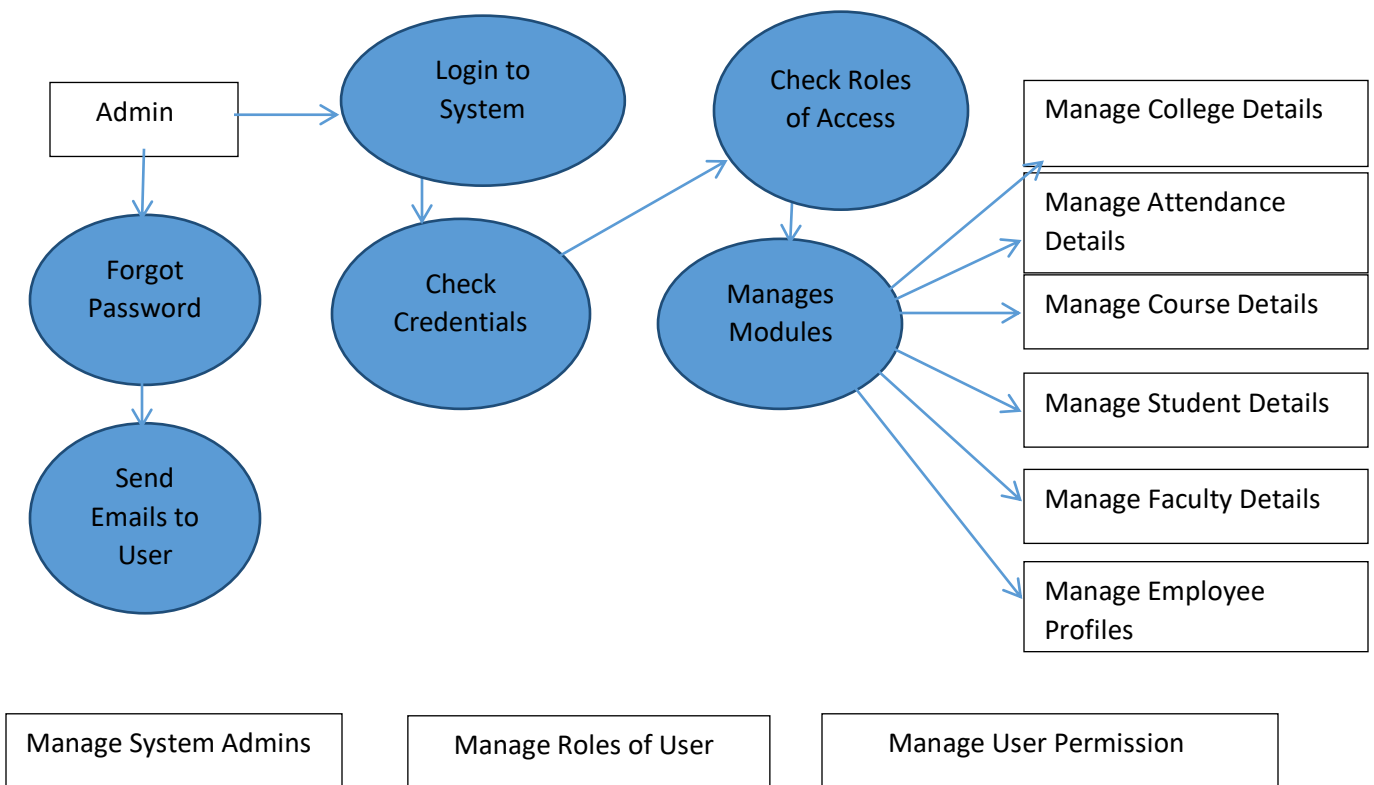

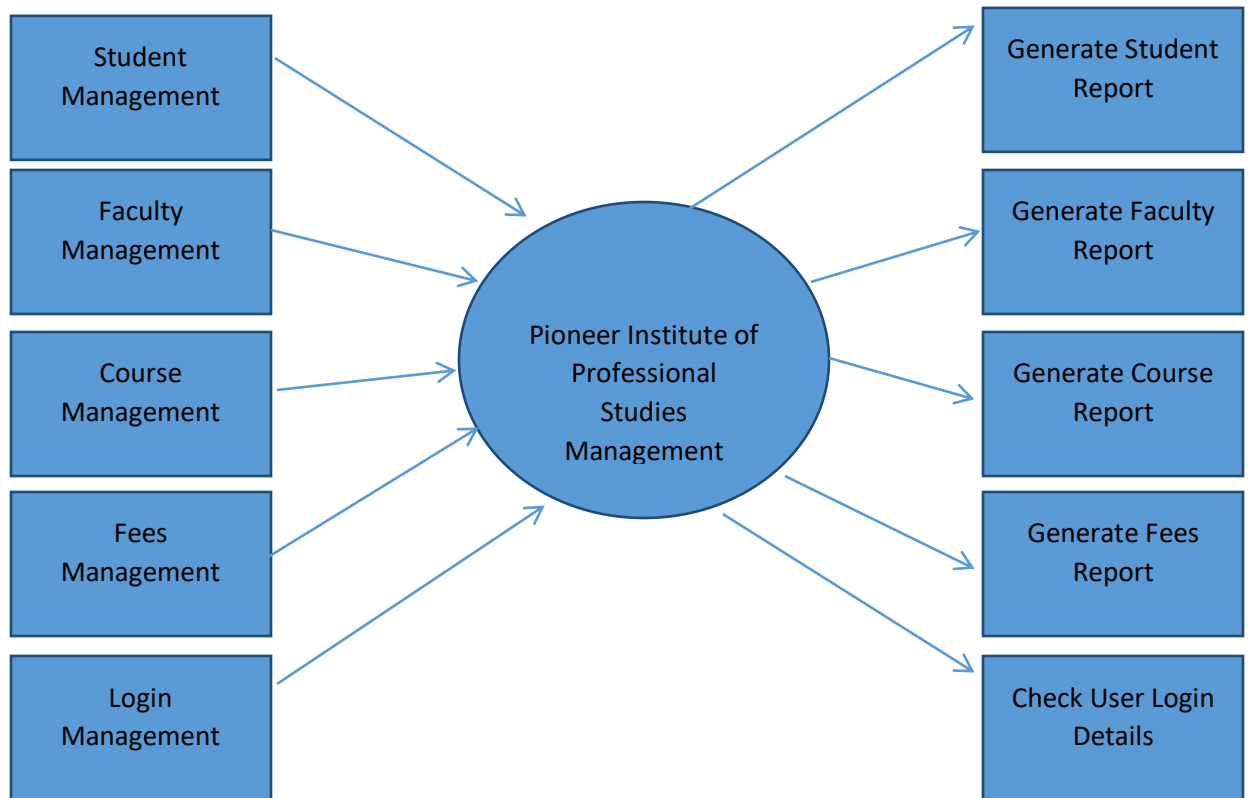

## ERP MANAGEMENT AT A GLANCE

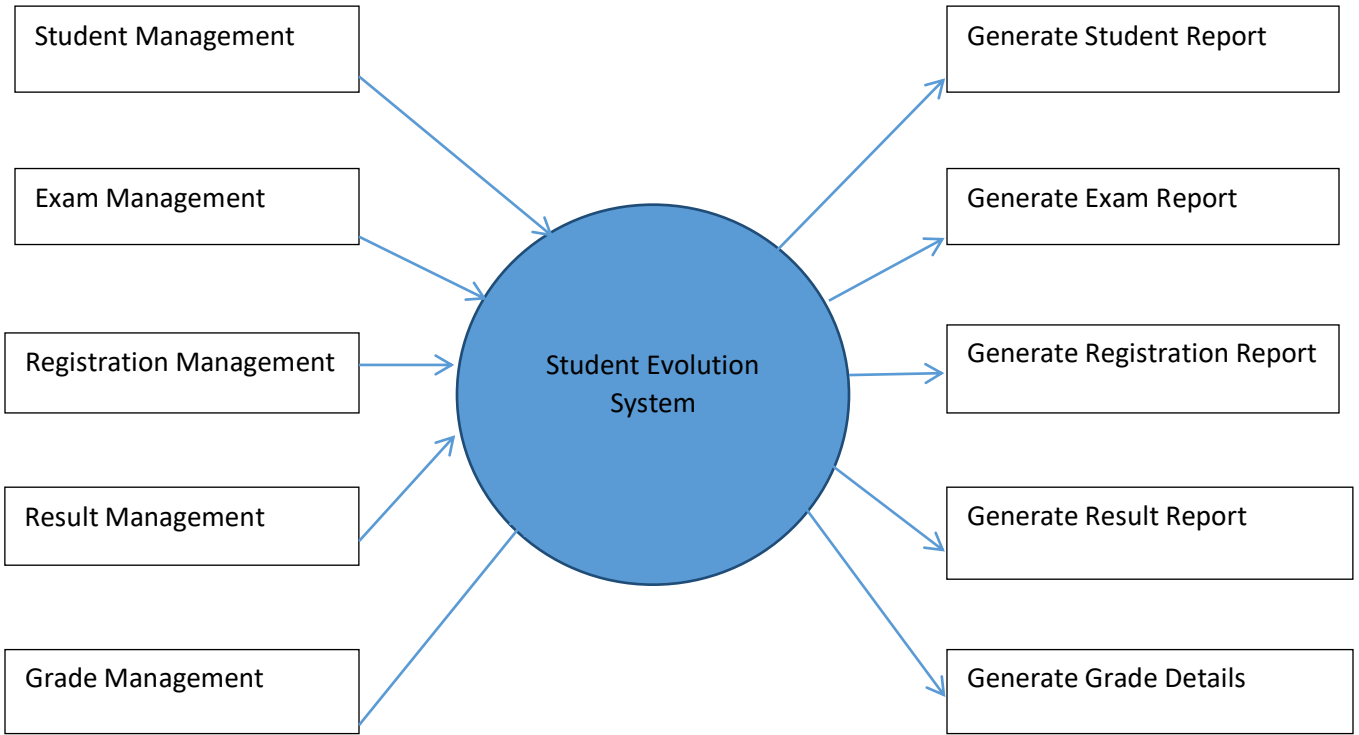

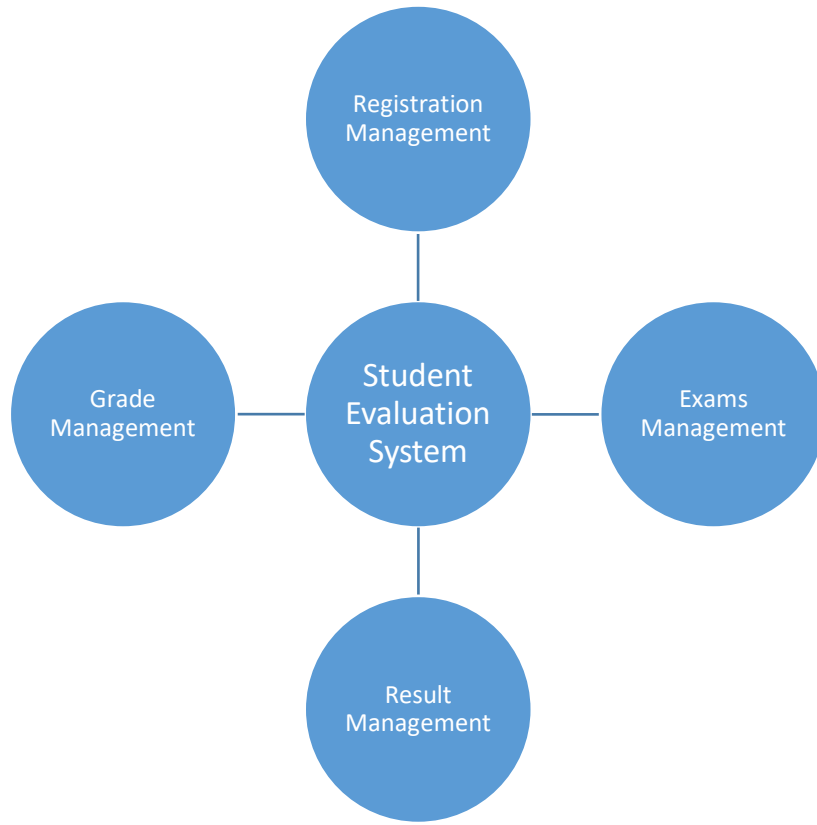

### **MODULES IN THE ERP**

- Admission Management
- Payroll Management
- User Management
- Scholar Management
- Attendance & Leave Management
- Scholar Activities Management
- Result Processing
- Internal Result Processing, Final Result Processing
- Teachers Diary & Lesson Plan

## 5. Evidence of Success

This best practice resulted in achieving the following as measure of success:-

- ➔ Web enabled
- ➔ Individual login for parents, staff and students
- ➔ Access from anywhere
- ➔ Mobile app for student and staff
- ➔ Individual model based dash board
- ➔ Individual student dash board
- ➔ Management and staff dashboard
- ➔ Easy access to find out the details
- ➔ Safe and secure of data or information and files
- ➔ Lowering the task weigh
- ➔ Increasing efficiency
- ➔ Better control
- ➔ Real time reports

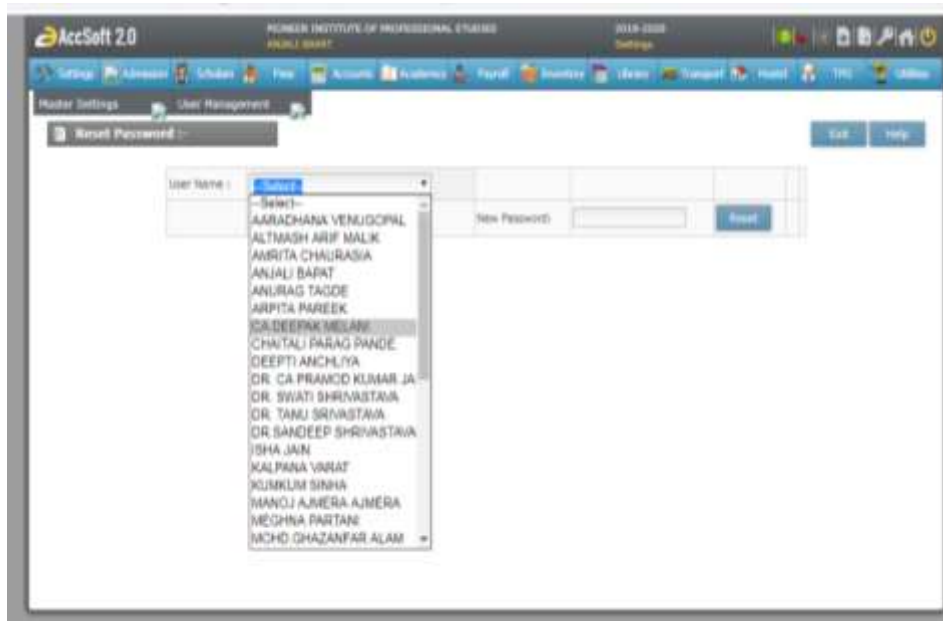

**Evidence of Success: Highlight of some main Modules of the ERP system:**

1. User login / Admin login

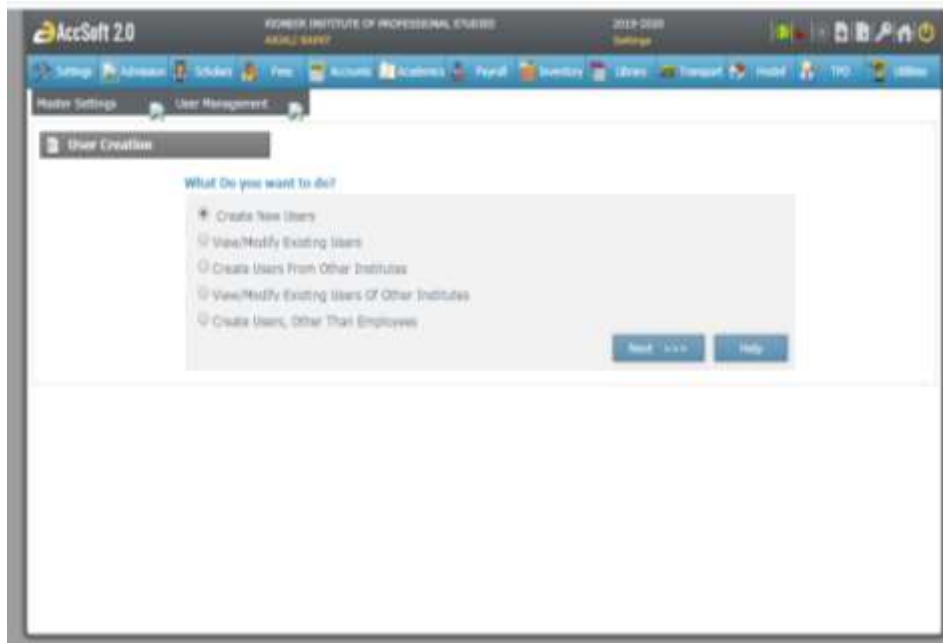

The screenshot displays the login page for AccSoft 2.0. At the top, there is a blue header with the AccSoft logo (a stylized 'e' in yellow and blue) and the text 'AccSoft 2.0 Login'. Below the header, the main content area is white and contains the text 'Identify Yourself' centered. Underneath, there are two radio button options: 'Faculty / Staff' (which is selected) and 'Parent / Student'. Below these options are two input fields: 'Username' and 'Password'. A 'Login >>' button is located at the bottom right of the form.

## 2. Forget password control by admin and or by user

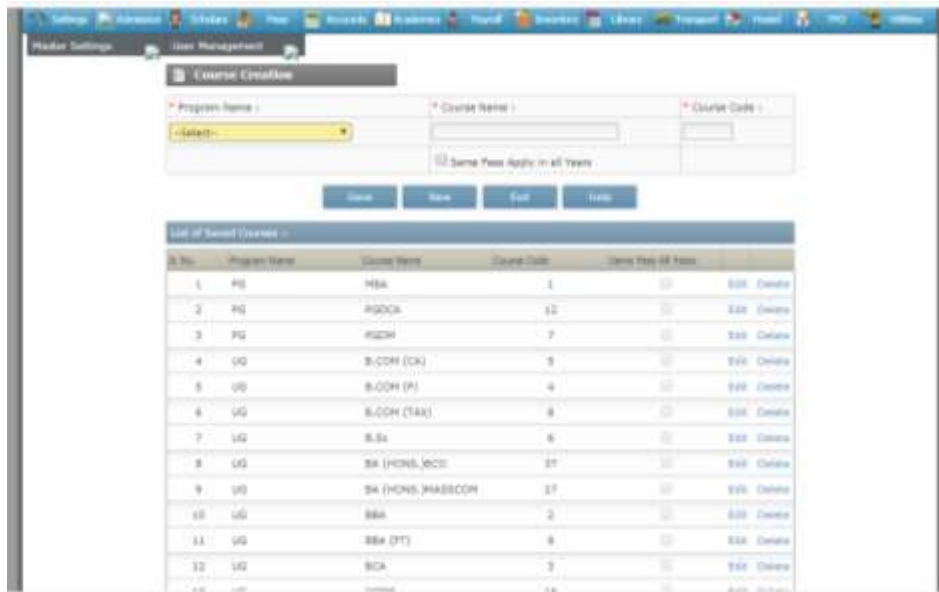

## 3. Update details/delete/add detail by admin

4. Academics Information: This module gives the information about

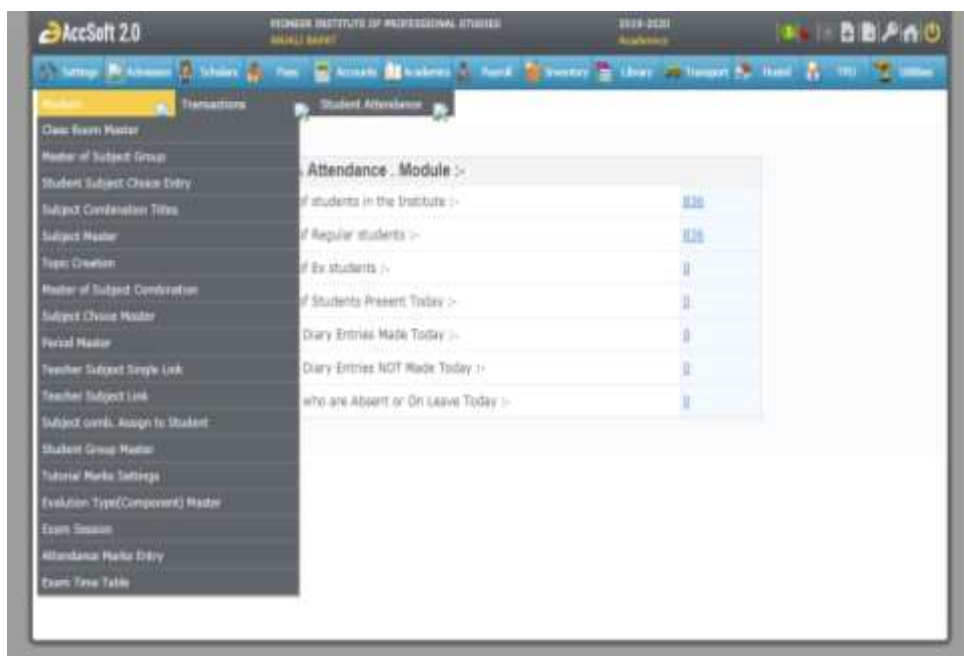

- Course: This contains the information about the number of the courses offered by the college

The screenshot shows a software interface for creating a course. At the top, there is a 'Course Create' form with fields for 'Program Name', 'Course Name', and 'Course Code'. Below the form are buttons for 'Save', 'New', 'Edit', and 'Help'. Underneath the form is a table titled 'List of Saved Courses' with columns for S.No., Program Name, Course Name, Course Code, and a checkbox for 'Save This as New'. The table contains 14 rows of course data.

S.No.	Program Name	Course Name	Course Code	Save This as New
1	PG	MBA	1	<input type="checkbox"/>
2	PG	MCOM	12	<input type="checkbox"/>
3	PG	MBA	7	<input type="checkbox"/>
4	UG	B.COM (CR)	9	<input type="checkbox"/>
5	UG	B.COM (P)	4	<input type="checkbox"/>
6	UG	B.COM (TAX)	8	<input type="checkbox"/>
7	UG	B.BA	6	<input type="checkbox"/>
8	UG	BA (HONS, JCC)	21	<input type="checkbox"/>
9	UG	BA (HONS, MASSCOM)	27	<input type="checkbox"/>
10	UG	BBA	2	<input type="checkbox"/>
11	UG	BBA (IT)	9	<input type="checkbox"/>
12	UG	BBA	3	<input type="checkbox"/>
13	UG	BBA	14	<input type="checkbox"/>
14	UG	BBA	15	<input type="checkbox"/>

- All Master Entries: This contains the number of staff available in each department

The screenshot shows the 'Attendance Module' in a software interface. On the left, there is a sidebar menu with various options. The main area displays a table with the following data:

Attendance - Module :-	
of students in the Institute :-	1130
of Regular students :-	1130
of Ex students :-	0
of Students Present Today :-	0
Diary Entries Made Today :-	0
Diary Entries NOT Made Today :-	0
who are Absent or On Leave Today :-	0

5. Scholar / Student Master: This module gives information about

- Profile: This provides personal details of the student.

7. Result Processing: It is perhaps the most sensitive process in any university or in any educational institute because the future of students is depending on their results. Hence all the educational institutes require trustable, reliable, foolproof and secure software for their result processing/ examination department. Here is the short explanation of the process and workflow of ResultSoft 2.0. It's reliable and secure as any educational institute would want and also covers all the possible tasks that are carried by examination department of a university.

**Result Generation Information:** All Examination and Result generation tasks are done with the help of **RESULTSFT 2.0** Module.

### Checking for Exam Eligibility

After examination form filled by students. Institute will appoint three verifier who will check student's eligibility for appearing in exam.

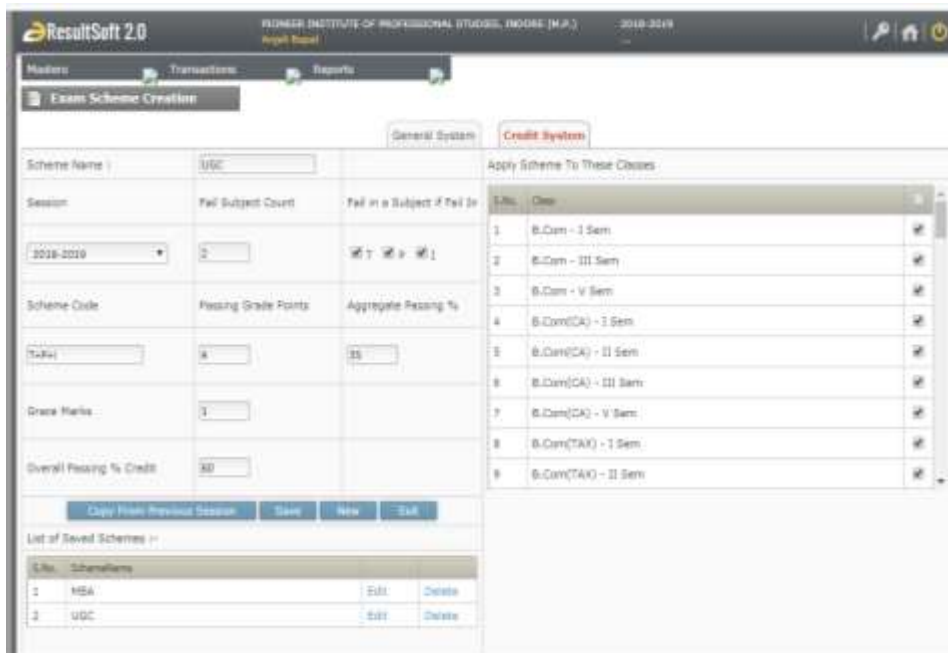

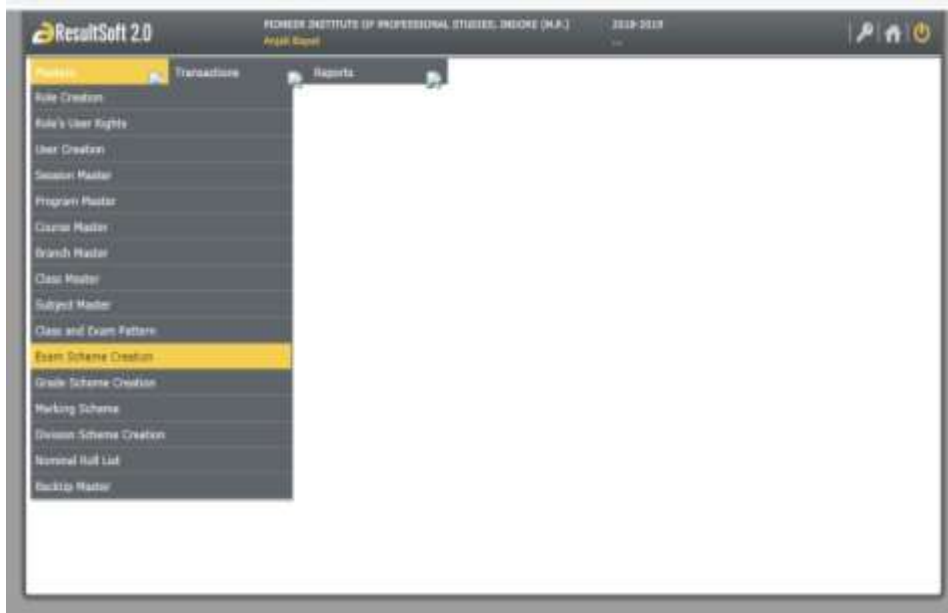

First will be from Library to verify library no dues of student second will be from accounts department to verify fees no dues and third will be from academic department to verify students' attendance.

### Admit Card Generation

After student is verified by all three departments admin will enable his/her name for Admit Card download. After that student can login to web site and download his/her Admit Card.

## Nominal Roll List Creation

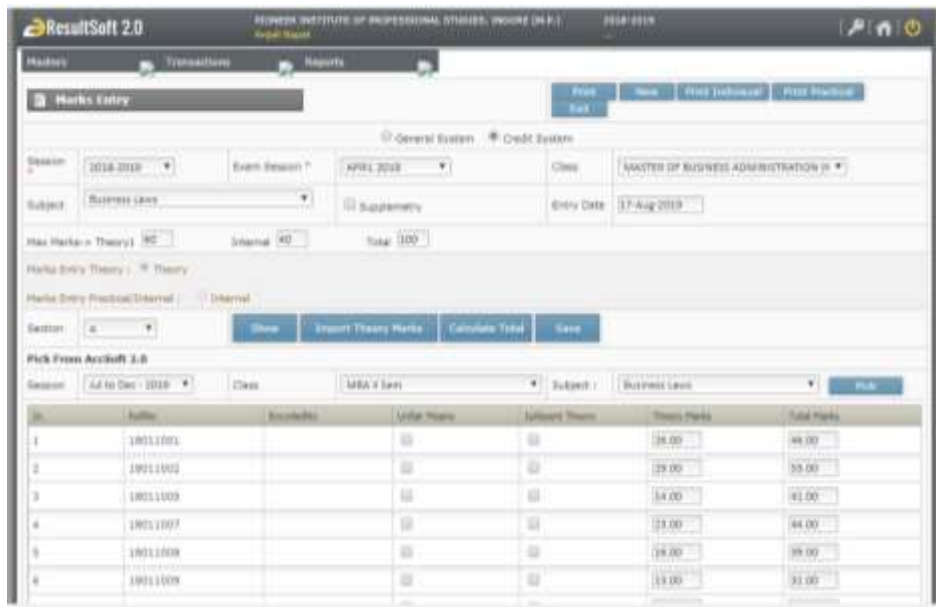

The examination forms data that is saved in software's database will be used to prepare nominal roll list by exam department for further result processing. This list can be printed for notice board display. Nominal roll list will have all the information related with student, his attempt (1st or more), his regularity (regular or ATKT) and the subjects in which he is going to appear in exam.

- Marks Entry Module:

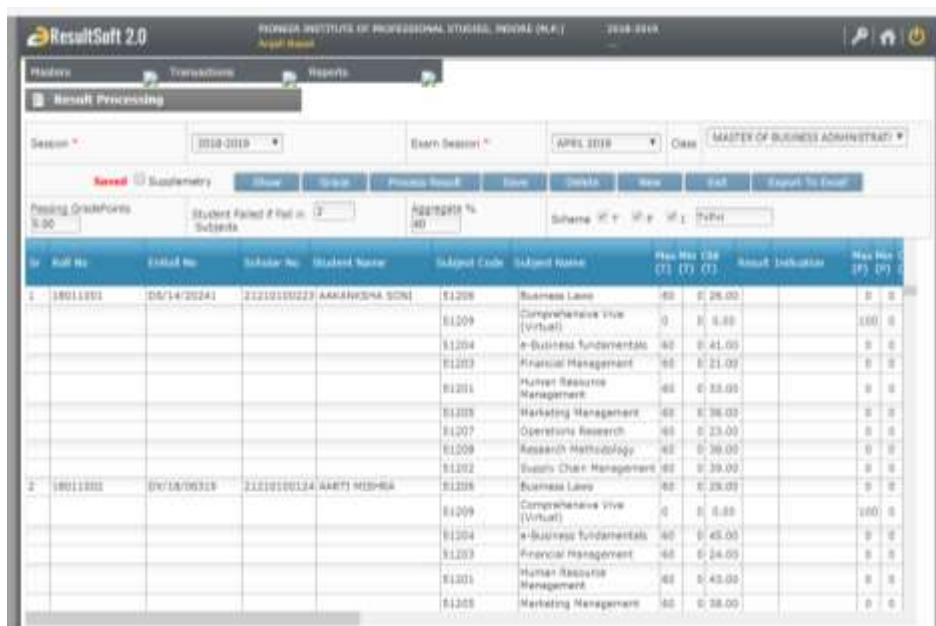

- Result Processing Module: Result Processing

- A. For Regular Students

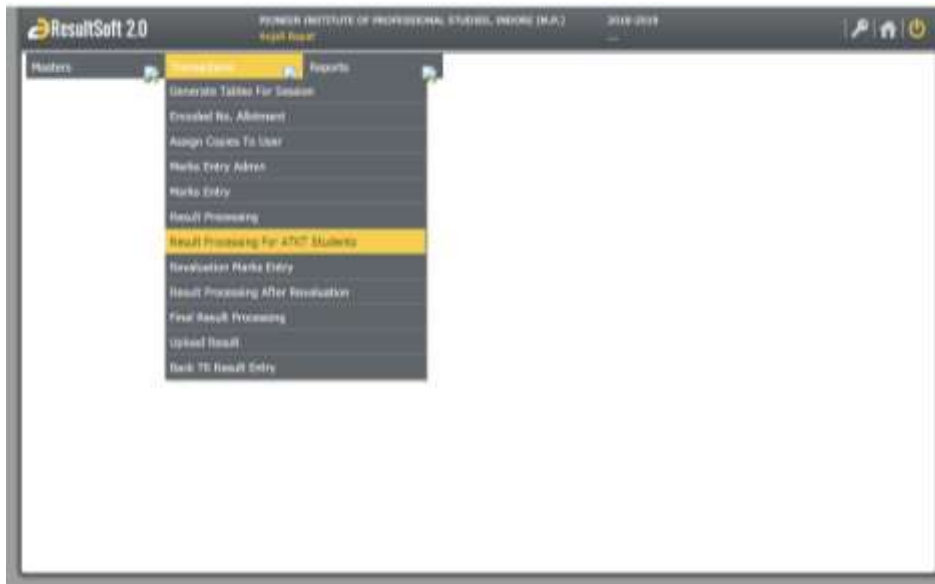

Result Processing will be done on the basis of Course / Branch and semester for regular students. After this processed result is saved marks entry will be locked automatically.

- B. For ATKT Students

Result processing for ATKT students will be done separately for which the marks of non ATKT subjects will be picked from previous exam.

- Similarly Result Processing for ATKT and REVALAUTION Modules

## 8. Result Declaration & Mark Sheets Generation:

### A. Mark Sheets Generation

After the result processing is done for a class, the mark sheets can be printed for that class. Mark sheets will be printed on preprinted papers given by university.

## **6. Problems Encountered and Resources Required**

The success depends on the skills and experience of the workforce, including education and how to make the system work properly. Sharing internal information between departments can reduce the efficiency of the software. There were various problems and challenges faced in implementing the ERP such as coordination amongst the various departments, data gathering, data migration, security implementation, shifting from manual to automation, staff behavior challenges, etc.

An ERP implementation will probably be the most complex technology project ever undertaken on campus. Therefore, executives at institute and college community must know as much about ERP systems and the ERP project as practical. Service for students should be a major priority with an ERP system implemented within the institute.

In the coming years the biggest challenge of our college will be the attempt to manage the complexity in one systematic vision through an information system that can be shaped and up-to date with the evolution of technology.
